Force restore conf backup

X-Road 7 force restore conf backup
Meant to be used on uninitialized ss and not in cluster

From old ss
- take conf backup
- get UID from(UID is for ex. ee-dev/GOV/70009770/tehik_dev)

```
cat /etc/xroad/gpghome/openpgp-revocs.d/<-SOME-NUMBERS->.rev | grep uid
```

On new ss slave(s)

```
/usr/share/xroad/scripts/generate_gpg_keypair.sh /etc/xroad/gpghome <-UID->
```

On new ss master

```
/usr/share/xroad/scripts/generate_gpg_keypair.sh /etc/xroad/gpghome <-UID->
su xroad
/usr/share/xroad/scripts/restore_xroad_proxy_configuration.sh -f /tmp/ss-automatic-backup-
2022_03_08_031501.gpg -F -N
```

Create cluster
